

Protect Your Patients at Critical
Points of Transit with **MediGate**

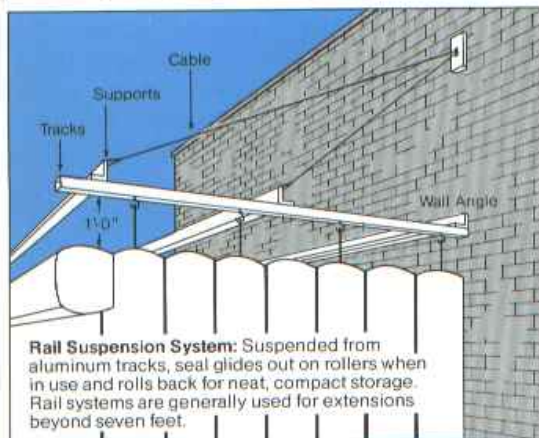

...Soft-Pressure Hospital Access Seals from **AirLocke**

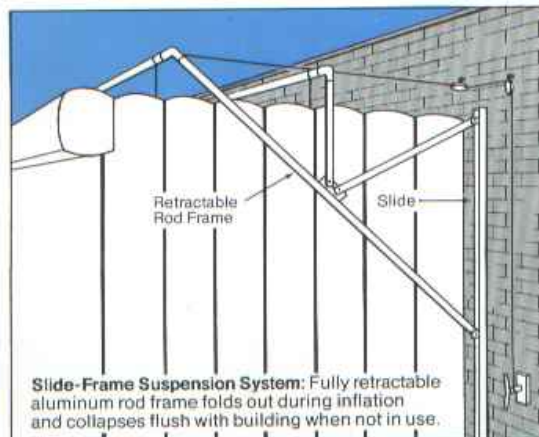

Three Distinct Suspension Systems Further Address Your Design Needs

Elastic Rope Suspension System: Shock cords, set at an angle, stretch out for tension support during inflation and automatically recoil when seal is deflated.

Rail Suspension System: Suspended from aluminum tracks, seal glides out on rollers when in use and rolls back for neat, compact storage. Rail systems are generally used for extensions beyond seven feet.

Slide-Frame Suspension System: Fully retractable aluminum rod frame folds out during inflation and collapses flush with building when not in use.

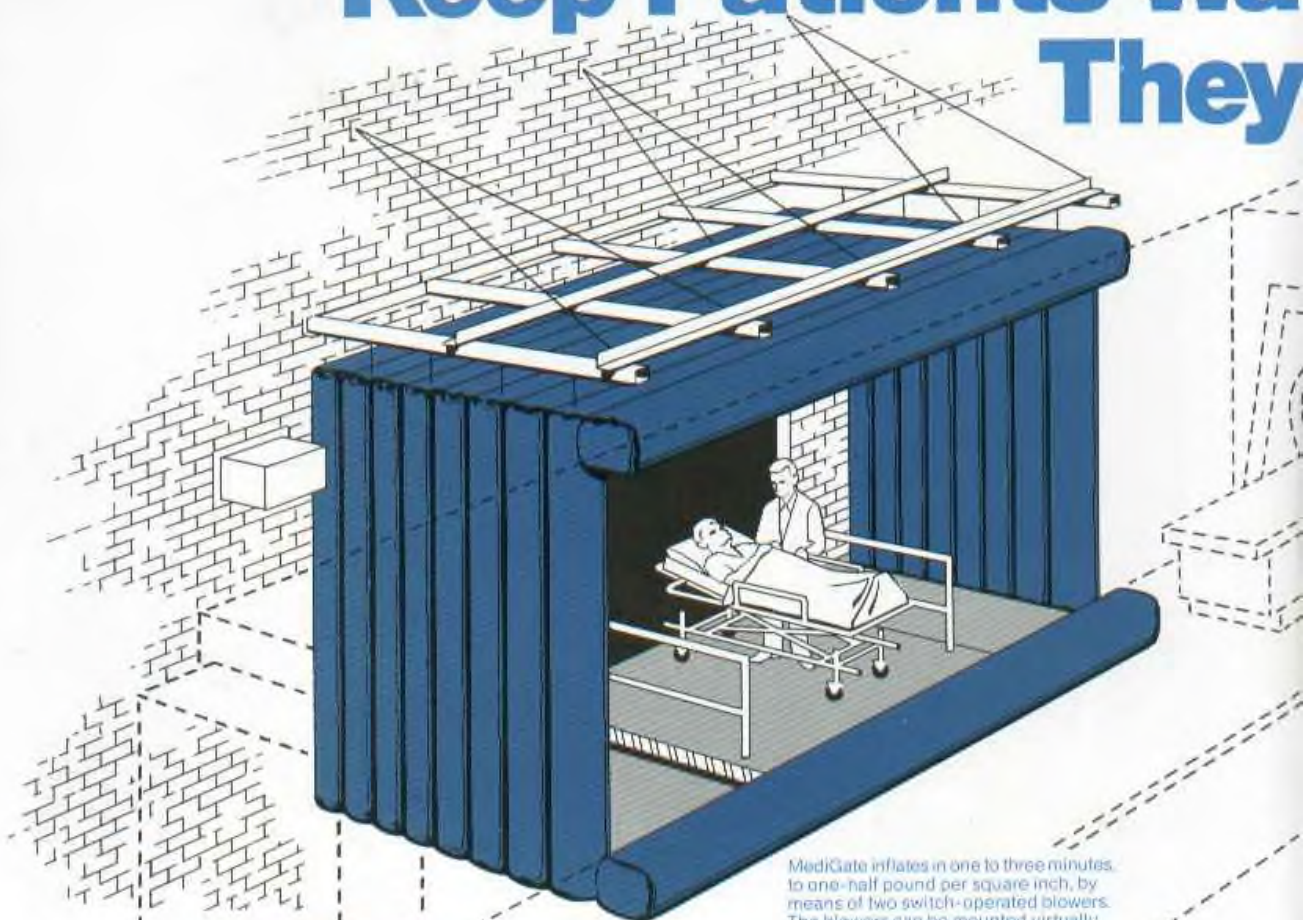

For complete details on MediGate hospital access seals, contact an AirLocke sales representative today.

Keep Patients Warm They

When not in use, MediGate stores unobtrusively around entrance perimeter

MediGate inflates in one to three minutes, to one-half pound per square inch, by means of two switch-operated blowers. The blowers can be mounted virtually anywhere to suit the configuration of your building entrance

Warm, Dry and Safe When Are Most Vulnerable...

MediGate custom-designed, inflatable entrance seals by AirLocke offer a simple, cost-effective way to protect patients, hospital personnel and sensitive medical equipment from the elements and other potential hazards while in transit between the scanner vehicle and hospital access point.

Currently in use at more than 400 hospitals and medical centers throughout the country, MediGate perimeter seals inflate in just minutes to eliminate exposure to wind, rain, snow and temperature extremes, and are guaranteed to fit all vehicles participating in your mobile diagnostic equipment program.

MediGate Offers All the Quality Features of Industrial-Grade Dock Seals with a Custom-Tailored Appreciation for Appearances

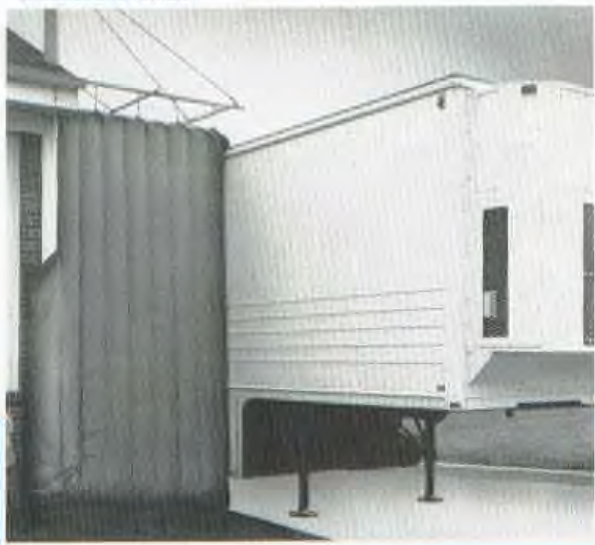

MediGate is constructed of a long-lasting, puncture-resistant neoprene or hypalon-coated nylon and is available with a choice of three uniquely functional suspension systems: a simple elastic rope system, a smooth-rolling rail system, and a fully retractable slide-frame system. AirLocke, a leading manufacturer of inflatable dock seals for the materials handling industry, custom engineers and fabricates each seal to conform to your most difficult mechanical specifications — as well as the architecture of your building — so MediGate will serve practically and unobtrusively for years to come.

When inflated, MediGate forms a tight, draft-free tunnel between the hospital entrance and vehicle.

Patients are kept warm, dry and safe inside MediGate.
